

# March is Colorectal Cancer Awareness Month

Isn't it time YOU told all your friends and loved ones about  
*AmazinGrape!*

Colorectal Disease and Cancer is a huge concern for so many people, especially if their family or loved ones has experienced the pain, problems and embarrassment associated with this disease. Treatment options are varied and expensive, and time consuming. Dr. Masquelier of France told people about the benefits of vinifera (wine) grape seed back in 1978, but even today, people aren't being told about the research involving the Muscadine Grape, which is 40 times stronger.

We are on a mission to tell people the truth about  
Colorectal Disease and tell them there is something really great  
they can share with everyone right now!

Researchers already know, But you  
haven't been told about the latest colorectal research.

Why? Because researchers have to wait until they are finally allowed to publish their results in less noticed journals where the general public may not hear about.

Many years ago, The Royal Society of Medicine in England in a large forum, expressed so much concern for the welfare of the colon. Their conclusion was colon health may be the most important thing you should consider. They said, "Every disease and finally death begins in the colon." Recently we received a report by two doctors, who reported that some 3½ million people are scheduled for a colonoscopy by their doctors each year, and that some 70,000 die from the procedure (punctured colon, dirty instruments, etc.) **Interestingly that was 22% more than died of colon cancer. Several years ago, a Major University Hospital did a multi-million dollar study on the effects of the Muscadine Grape on the Colorectal system. Did you hear about it? Was it even mentioned on the nightly news? The Muscadine grape, a totally natural product inhibited the growth of colon cancer (in-vitro) over 80% in only 7 days.** There are also all natural products to clean the entire digestive system and keep it healthy. We believe you deserve to be told the truth and not insult your intelligence. With this type of research results...

...wouldn't you want all your loved ones to be taking *AmazinGrape* everyday?
